Product Backlog

1

Product Backlog Items at the top of the Product Backlog have been refined and are at higher level of detail than lower priority items.

Good Practice

Normally, there should be enough refined items for the team to include in the next 1–2 Sprints. Items later than that get progressively larger and unclearer, since we do not want to unnecessarily invest effort into them too early.

RULE   **GOOD PRACTICE**   **AVOID**

Product Backlog

2

The Team can prioritize
Product Backlog Items
that have a strong
technical element to them.
